PROFESSIONAL SUMMARY

Full Stack Developer with production experience building and shipping end-to-end web applications across frontend and backend. Proficient in Vue.js, JavaScript, Python, FastAPI, PostgreSQL, and cloud deployment on Google Cloud Run. Proven ability to design scalable architecture, integrate REST APIs, and deliver clean, well-documented code in collaborative, cross-functional environments. Driven by ownership, adaptability, and building solutions that make a measurable difference.

WORK EXPERIENCE

Junior Full Stack Developer & Technical Lead | Pro Ladang PLT, Bukit Jalil *Dec 2025 – Present*

- Co-architected and shipped a GIS-enabled full-stack SaaS platform using Vue.js 3, FastAPI, and PostgreSQL, serving as one of two developers responsible for the entire stack from database schema design to production deployment on Google Cloud Run.
- Built an automated data pipeline integrating a third-party satellite imagery REST API with a FastAPI scheduler, replacing a 2-3 day manual reporting workflow with a single-click process and saving the operations team 10+ hours per cycle.
- Designed and implemented a subscription-based access control system in PostgreSQL, managing trial and paid tier permissions, user ownership, and payment tracking across the full user lifecycle.
- Led a full UI/UX redesign: built a motion design system with Vue.js transitions, responsive layouts, and bilingual support (English / Bahasa Melayu), transforming an internal tool into a polished, investor-ready SaaS product.
- Developed an investor-facing landing page in Vue.js with real-time field visualisation driven by live API feeds, credited by the CMO for generating investor interest during a Southeast Asia expansion pitch.
- Managed full deployment pipeline across Google Cloud Run, Firebase Hosting, and GCP schedulers, maintaining production uptime across environments.

Data Analyst | Pro Ladang PLT, Kuala Lumpur *Oct 2025 – Nov 2025*

- Built an automated report generator end-to-end: designed the Vue.js interface, developed the FastAPI export backend, and shipped to production, replacing a 2-3 day manual data process with a single-click workflow used daily by the operations team.
- Executed a full data migration of physical records into structured digital format: merged fragmented databases, enforced schema consistency, and validated all data to produce a clean production-ready PostgreSQL dataset.
- Delivered third-party satellite API integration: built the data ingestion pipeline, tested multi-date fallback logic, and established data contracts the entire monitoring system depends on.

Front-End Developer (Internship) | Abata Commerce Sdn Bhd, Cyberjaya *Mar 2024 – Aug 2024*

- Developed user-facing modules for three live Malaysian government platforms (MYKKP, PINS, HIAS) collectively serving 100,000+ registered users managing compliance, inspection, and audit workflows.
- Built compliance and inspection workflows for defence and automotive sectors. Delivered modules passed UAT on first submission and went live without rollback, meeting the client's zero-defect deployment requirement.
- Delivered a self-service admin data correction tool that cut average correction turnaround from several hours to under 15 minutes during business hours, eliminating backend team involvement for urgent live data fixes.

KEY PROJECTS

AgriAssist V2 - Field Monitoring Platform using Satellite Data *Dec 2025 – Present*

Vue.js 3 | FastAPI | PostgreSQL | Google Cloud Run | Leaflet.js | Google Gemini AI | REST APIs

- Architected a full-stack SaaS platform monitoring 1,000+ hectares of paddy fields using satellite imagery, AI-powered pest detection, and real-time weather integrations.

- Engineered the core interactive map module, data visualization dashboards, and dynamic PDF report export system as one of two primary developers.
- Implemented a secure subscription access model and robust data pipeline to handle complex geospatial data processing.

Tahlil Tracker— Community Notification & Route Tracker

Mar 2026 – Present

Vue.js 3 | FastAPI | Python | PostgreSQL

- Developed a real-time coordination and progress-tracking web platform deployed for a community of 50+ active users across 30 residential locations during seasonal visitation events.
- Built a live geolocation tracking system enabling hosts to monitor guest proximity and arrival windows, significantly optimizing hospitality preparation and timing.
- Implemented dynamic route-tracking flows and real-time notification dispatches to streamline complex multi-house schedules.

Smart Car Distance Measurement — Final Year Project

2024

Python | OpenCV | Computer Vision | Sobel Edge Detection

- Engineered a computer vision-based software system utilizing advanced edge-detection algorithms for highly accurate inter-vehicle distance estimation.
- Validated system performance through rigorous video and field testing under varied lighting and environmental conditions.
- Recognized for technical innovation with a Silver Medal at CITREX 2024 and achieved a Top 20 Finalist ranking in the national FYPro-Com 2024 competition.

TECHNICAL SKILLS

Frontend: Vue.js 3, Vuetify, React.js, Next.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, Leaflet.js, Figma

Backend: Python, FastAPI, SQLAlchemy, Pydantic, RESTful API Design, API Integration

Database: PostgreSQL, MySQL, Firebase, Supabase

DevOps & Tools: Google Cloud Run, Firebase Hosting, Git, GitHub, GitLab, Swagger, Cloudinary

EDUCATION

Bachelor of Computer Science (Software Engineering) with Honours | [Universiti Malaysia Pahang](#)

Oct 2020 – Oct 2024

Dean's List: Semesters 1, 5, 6 & 7 | Relevant coursework: Software Architecture Design, Software Requirement Workshop, Software Design Workshop

Science Stream Module II (Two Semester) | [Kolej Matrikulasi Pahang](#)

April 2019 – April 2020

Relevant coursework: Computer Science, Physics, Mathematics, Chemistry

AWARDS & ACHIEVEMENTS

- Khazanah Nasional Excelerate Scholar — competitive national programme for high-potential Malaysian graduates (2025). Covers Python, data analytics, and machine learning.
- Silver Medal, CITREX 2024, UMP Innovation & Research Exhibition.
- Top 20 Finalist, FYPro-Com 2024, national final year project competition.
- Dean's List, Universiti Malaysia Pahang Al-Sultan Abdullah, Semesters 1, 5, 6, and 7.
